

Model A-200 "Hot Hearth" Cremation Equipment

The American A-200 Model is our entry level cremator.

With an average cremation time of approximately 120 minutes or less, the A-200 can easily perform 4 cases per 8-10-hour day. The primary feature on the A-200 is "Throat Air" and "Hearth Air" Control. Throat Air allows the operator the ability to effectively control and eliminate stack emissions. Hearth Air allows the operator full control of the primary chamber over fire air which effectively decreases cremation times. Additionally the combustion process is cycled and monitored by automatic temperature and timer controls which ensure fuel efficiency.

Minimize Downtime

With the American "Trilogy" Combustion Control System (shown here) you get the advantage of increased fuel efficiency, advanced monitoring and diagnostic capabilities.

The "Trilogy" system allows for immediate and accurate troubleshooting, decreasing and/or eliminating costly down time. American Crematory Equipment Company is proud to offer a wide range of operating systems and technology to meet every customer's needs.

CASE CAPACITY: 400 Lbs.
